

## LifeLine project by the non-profit organization Life Project 4 Youth

### Creation

2009

### Main mission

Facilitate around the world the professional and social integration of young people in highly precarious situations and deeply affected by exclusion

[Website of the non-profit organization](#)

### Scope of action

Mainly Asia

### Objectives

- To guide young people towards social and financial independence
- To make young people responsible for their future life
- To help young people build a life project

## LifeLine project

### WHAT?

In August 2017, LP4Y opened a Life Project Center in Malwani, a slum area of Mumbai, to welcome young people and facilitate their social and professional insertion.

The Roquette Foundation supported the Yummy program (creation of a nutritional snacks microbusiness). In 2019, the Foundation wishes to continue its collaboration with LP4Y on the "Lifeline" program, developed to respond to problem issues affecting the slum areas, namely healthcare and improving living conditions. With knowledge of the field and the proximity of its teams, LP4Y can involve young people in this new project, the aim of which is to make the inhabitants aware of hygiene, health, nutrition and care while fostering the emergence of projects that benefit the community.

### HOW?

- By collecting data within the community itself in order to respond to the real needs of the populations in terms of health care
- By fulfilling its advocacy mission through playful and interactive awareness-raising activities (games, events, etc.) aimed at all slum dwellers
- By offering the inhabitants a precise mapping of existing health care in the slum area, via an application developed for smartphones

### POR QUÊ?

A falta de conhecimentos em termos de saúde faz com que os habitantes da favela recebam diagnósticos e tratamentos que não necessariamente são os mais adequados. Este aplicativo para smartphone, acessível a todos (o índice de smartphones na favela de Malwani aproxima-se de 100%), permitirá fornecer os primeiros conselhos de higiene e de tratamentos, assim como contatos do médico especialista mais próximo.

### Duração do apoio

2 anos
