

ROQUETTE: OUR ENVIRONMENTAL COMMITMENT

Roquette's mid & long term development plan is built on a sustainable approach which relies on economic, social and environmental pillars.

At Roquette, thanks to the exceptional potential of plant-based resources, we are able to offer a wide range of products and solutions for Food, Pharma, Nutrition and selected Industry markets.

For a long time, we have achieved outstanding raw material recovery rates and beyond this performance, we strive to preserve the environment worldwide.

In line with the Paris Agreement on climate change, we acknowledge that Global Warming is a major concern for the environment, the economy and all mankind. Therefore, we have identified three main areas where our actions will contribute to improve our environmental footprint and to adapt our operations accordingly:

Greenhouse Gas emissions: We will improve our energy efficiency by minimizing usage and promoting energy recovery. Where feasible, we will strive to use renewable energy.

Our goals are to save 1 million tons of CO2 equivalent and to improve our global energy efficiency by 10% in 2025 in comparison with our baseline of 2015.

Water: We will preserve this resource by reducing and recycling while complying with hygiene standards related to food safety.

Our goal is to reach a reduction of 20% of our global specific freshwater consumption in 2025 in comparison with our baseline of 2015.

Local Communities: Locally, our operations will control environmental risks and achieve further improvements in the local environment, the well-being of communities and the biodiversity.

Our goal is to implement globally 20 actions per year that have positive impact on local environment and biodiversity and to reach nearly 100% of waste valorization in 2025.

This commitment is built on an effective environmental management system. It will imply a continuous improvement of our environmental performance. It will be based on the implementation of best practices across all operations. Moreover, each new product or facility will have to be assessed in the light of its environmental impact, to offer more sustainable solutions to our customers.

To ensure the achievement of these objectives, we are raising the awareness of our employees, contractors and other key stakeholders through effective communication and training. We are allocating the appropriate resources to improve performance and we rely on everyone's engagement within the company.

At Roquette, we are fully committed to improving the well-being by offering the best of nature.

"I will apply and implement the principles of this commitment to minimize our environmental footprint, maximize value creation, meet customer expectations and preserve the sustainability of our company and its natural capital."

Jean-Marc Gilson,
Roquette CEO
March 2017
