

EXPLOSOL® – SODIUM STARCH GLYCOLATE

EXPLOSOL® is a superdisintegrant with an action mechanism based on water absorption, with tridimensional expansion, making the tablets and granules disintegrate quickly.

It is a potato starch based product that has excellent performance and cost-benefits, being widely used in the pharmaceutical industry.

Recommended use: It can be used in direct compression and in dry and wet granulation formulas.

Recommended concentration: 2.0% - 8.0%.
