

## PRESS RELEASE

# Roquette Launches Four New Solutions to Elevate Texture and Sensorial Performance in Cosmetics.

**Lille, France, April 7, 2026** - Roquette, a global leader in plant-based ingredients, announces four additions to its Beauté by Roquette® portfolio designed to help cosmetics brands create high-performance, sensorial solutions: Beauté by Roquette® DS 700 and three premium alginates. These innovations will debut at in-cosmetics® Global 2026 in Paris, April 14–16, where **Roquette Beauté will** also highlight its enriched portfolio following the integration of the IFF Pharma Solutions offering.

### Unveiling a Premium Range of Marine-Sourced Alginates

Beauté by Roquette® AG 215, AG 219, and AG 291 are a selection of premium alginates sourced from renewable brown seaweed. They are readily biodegradable and supported by recognized responsible-sourcing programs.

The Beauté by Roquette® Alginates offer a wide span of gelling behaviors, from viscous or elastic gels to firmer, shape-keeping structures, giving formulators flexibility to design creative textures and compelling consumer experiences. They also stand out for their ability to bring a high level of freshness and transparency in formulations.

In practice, Beauté by Roquette® AG 215 is well-suited for jelly and stick formats; Beauté by Roquette® AG 219 brings suspension properties, and Beauté by Roquette® AG 291 excels as a viscosifier. All three alginates also provide a cooling effect and a very light, smooth feel on the skin.

### Introducing a dual-impact innovation for inside-out protection and performance

Beauté by Roquette® DS 700 is an advanced, ready-to-use vegan softgel capsule technology for customizable premium packaging. It lets brands create distinctive single-dose capsules by tailoring shape, size, and color, while delivering premium cosmetic formulas. Starch-based and biodegradable, Beauté by Roquette® DS 700 stands out as an animal-free alternative to gelatin capsules while helping preserve sensitive actives and formulas.

Additionally, Beauté by Roquette® DS 700 is a high-performing film former for cosmetics. It provides 100% water resistance in suncare\* and makeup, showing a clear step change versus existing starch-based solutions and synthetic film formers, supporting long-lasting wear and SPF protection for consumers.

Building on the portfolio expansion announced in [March 2026](#), these launches bring new capabilities to sensorial design and wear performance.

“With the launch of Beauté by Roquette® DS 700 and our new alginate range, we are offering cosmetics brands with solutions to design innovative textures that perform and feel exceptional, while advancing sustainable choices,” says Bénédicte Courel, General Manager Cosmetics Business at Roquette. “It’s another milestone in our Roquette Beauté journey, where our expanded portfolio and enriched expertise have come together to support tomorrow’s beauty.”

## PRESS RELEASE

Roquette Beauté will present these new ingredients and its complete portfolio at in-cosmetics Global 2026 in Paris, at **booth 3G110**, in the innovation zone and the sensory bar, and during a dedicated technical session, April 15 at 15h15, Theatre 4.

\*In vitro tests showed that Beauté by Roquette® DS 700 at 3% in a sun care lotion achieves >100% SPF water resistance, improving existing starch-based solutions and outperforming a synthetic PVP benchmark

### **About Roquette**

Roquette is a global leader in sustainable plant-based solutions, driving innovation and strong partnerships that are shaping the future of nutrition, health and pharma, cosmetics, and bioindustry.

The company harnesses natural resources such as wheat, corn, seaweed, and cellulose to craft high-performance ingredients used in everyday foods, oral medications, advanced biopharmaceuticals, cosmetics, and a range of bio-based products.

A family-owned company with over 90 years of expertise and 11,000 employees, Roquette serves clients in over 150 countries and is committed to creating lasting value for customers, patients, consumers, and society. Together, we turn the potential of nature into the essentials of life.
